SUMMARY

Senior software engineer with five years building web applications in **PHP** and **JavaScript**: Laravel backends, React and Next.js frontends, and the Linux infrastructure they run on. Currently maintaining multi-country company-registry platforms at Companies House Insights, covering order and payment flows, notification pipelines, queued and scheduled processing, and MySQL. Comfortable owning a feature from design through deployment.

EXPERIENCE

Senior Software Engineer

SEP 2025 – PRESENT

Companies House Insights · Singapore · Remote

- Develop and maintain the Laravel applications behind company-registry data platforms for Singapore, Indonesia, Thailand, the Philippines, Malaysia and other markets that share one architecture, where a change must hold across every market's configuration, content and data.
- Own order and payment flows end to end, including pricing and promotion rules, activity logging, and safeguards around automated customer email.
- Build queued and scheduled background processing: notification pipelines that react to changes in upstream data, and calendar-aware customer messaging that accounts for business hours and per-market public holidays.
- Take features from design through MySQL schema and migration work to deployment on Linux servers.

Senior Software Engineer

AUG 2024 – AUG 2025

Pakipreneurs · Islamabad, Pakistan · On-site

- Built backend APIs with Laravel, Nest.js and Express.js across concurrent client projects; promoted to Senior Software Engineer in February 2025.
- Integrated ActiveCampaign, Zapier, GoHighLevel and Keap to automate CRM and marketing workflows for clients.
- Maintained and extended legacy PHP systems on CodeIgniter, Kohana and Koseven while they carried production traffic, adding integrations and automations without rewrites.
- Contributed React frontends and designed relational and document schemas across MySQL, PostgreSQL and MongoDB.

WordPress Developer

Part-time

NOV 2023 – FEB 2024

Si Web 29 · Multan, Pakistan · Hybrid

- Managed WordPress projects end to end for client sites, including PSD-to-WordPress builds and on-page SEO.

Senior Laravel Developer

Part-time

MAY 2023 – SEP 2023

HashtagWeb · Multan, Pakistan · Hybrid

- Designed and built RESTful APIs in Laravel for dynamic web applications.

PHP Developer

DEC 2020 – MAY 2022

Dee Designers · Multan, Pakistan · On-site

- First engineering role: backend functionality for dynamic websites in PHP, with interfaces in HTML, CSS and JavaScript.
- Contributed inventory and workflow modules to an ERP system used by business clients.
